# Vidit Rawat

Unity Developer · Gameplay & Tools

viditrawatv68@gmail.com +91 87913 39410 Bengaluru, India
https://viditv68.github.io https://github.com/Viditv68 https://www.linkedin.com/in/vidit-rawat-baa13816b

Unity developer with 5+ years building gameplay systems, editor tooling and backend-connected features across console, mobile and PC. Currently developing Lokko (publisher: Sony), now in open beta on PS5, Steam and iOS.

## EXPERIENCE

### Unity Developer — Appy Monkeys
Jul 2025 – Present · Bengaluru

*Lokko · Sony as publisher · open beta on PS5, Steam, iOS · showcased at BitSummit*

- Owned the full iOS architecture, including touch controls, across every gameplay mechanic.
- Engineered a reusable local PvP framework, so new levels need only level design, plus a wave-based enemy spawner with difficulty scaling.
- Developed the two-player co-op robot level end to end: PS5 couch co-op with a pilot and a gunner whose blocks snap into platforms.
- Mentored junior developers through code reviews and led project knowledge-transfer sessions.
- Optimized the in-game Level Editor and adapted it into a separate iOS project.
- Set up platform-specific player and camera configs (speed, jump, roll) for iOS and console using ScriptableObject-Architecture.
- Created build tools that apply iOS or console animation sets automatically at build time, with a per-player animation report.
- Delivered authentication on AWS Cognito (email OTP, account deletion via SES) and shipped the in-game wallet.

### Software Development Engineer I — LightFury Games
Sep 2024 – Jun 2025 · Bengaluru

- Owned the entire Unity side of Gambit, a from-scratch project for a US client, including all UI and spin mechanics.
- Architected the leaderboard system and match summary screens; led gameplay bug fixing and UI work.

### Game Developer — Freelance
Jun 2024 – Aug 2024 · Remote

- Built 6 educational games from scratch, and a runtime level-authoring scene for former employer CYMPL Studios that let designers lay out 3D levels in play mode.

### Game Programmer — CYMPL Studios
Mar 2021 – Nov 2023 · Pune (Remote)

- Implemented retention systems (tiered achievements, energy, notifications, milestone rewards, rate-us) with Firebase, UniRx and DOTween.
- Owned and refactored the Story Narration module; built tools that import Google Sheets dialogue into ScriptableObjects.
- Audited the codebase and refactored several gameplay modules for maintainability.

## TECHNICAL SKILLS

| | |
|---|---|
| **Core** | C#, C++ · Unity (primary), Unreal Engine 5 (familiar) · PS5, iOS, Android, PC |
| **Unity** | New Input System, Cinemachine, ScriptableObjects, Particle Systems, Unity Notifications |
| **Plugins** | Odin Inspector, DOTween, PrimeTween, UniRx, ScriptableObject-Architecture |
| **Patterns** | MVC, State Machine, Observer, Command, Object Pooling |
| **Backend** | Firebase, AWS Cognito, Amazon SES |
| **Tools** | Visual Studio, Git & GitHub, Sourcetree, Perforce · Claude (AI coding), ComfyUI (AI images) |

## PERSONAL PROJECTS

**Top-Down Shooter (in progress):** single, burst and auto fire with capped spread, ScriptableObject weapon data, per-weapon Cinemachine framing.

**Outland (team lead):** player mechanics, state-based enemy AI and HUD; led the team, reviewed code and pitched the concept.

## PUBLICATION

**Neural Networks based Hand-crafted Genetic Learning Approach to Simulate Space Mario Game** 2020

IEEE · International Conference on Smart Electronics and Communication (ICOSEC 2020) · Co-author

## EDUCATION

**Game Programming Fast Track — Scarborough, Canada** Jan – Apr 2024

**B.Tech, Computer Science — Graphic Era University, Dehradun** 2015 – 2019
